Harmonic

This is an online social platform for people to share music. It could be either a mobile app or a website. While there are existing apps like Spotify to listen to music or apps like Discord to talk to people, this platform would combine these goals by putting emphasis on sharing music with others and encouraging discussion on songs. There would be unique features like listening to music at the same time and recommending songs to friends. This app is important because it provides a unique service geared toward music, while still appealing to a broad audience.

InspireUs

Creators (artists, writers, composers, etc.) often struggle to come up with new ideas for their work. InspireUs would be a mobile app or website designed to generate simple prompts for creators to give them ideas. Users can set a schedule for how frequently they want to receive prompts and can keep track of how many prompts they have fulfilled, using a level system to track progress. Additionally, there would be a community aspect where people can share their work and see what other people have made using the same prompt. Different media, such as images, text, and audio, and links to existing creative social media, would be supported so a variety of creators could be engaged. There could also be an official prompt decided by the app that changes regularly, to encourage everyone to participate with that prompt.

MyStamps

There are stores and other services that use physical stamp cards for frequent customers. Our idea is to have a mobile-accessible app for collecting stamps. Service providers can register with the app to add stamps for their service, and customers can record stamps they have with a scanning function. This app would be useful because physical stamp cards cost extra to print, can be lost, and are cumbersome to carry around. Many people will always have their phones with them, so using an app to keep track of stamps would be more convenient. Additionally, service providers may wish to keep track of how many customers use their stamp cards more easily.
